Conversion Rate

\$6.35M

5-Month Revenue

Where are users dropping off — and are they coming back?

THE PROBLEM

20 million events. Zero visibility into two questions that determine whether the business is healthy.

BLIND SPOT 1

Where are users dropping off?

The platform has 1.6M users browsing products. Leadership has no visibility into where exactly in the journey users are leaving — or what it costs.

BLIND SPOT 2

Are acquired users coming back?

Acquiring a user costs money. If they buy once and never return, the business is on a treadmill — permanently spending to replace the users it keeps losing.

Blind Spot 1 → Funnel Analysis

Blind Spot 2 → Cohort Retention Analysis

THE DATA AT A GLANCE

20.69M

 Purchase **6.92%**

WHY DEDUPLICATION FIRST

1,109,098 duplicate rows were removed before any analysis — 5.36% of the raw dataset.

Keeping duplicates would have inflated every metric — conversion rates, user counts, revenue. All findings would have been slightly wrong.

THE CONVERSION FUNNEL

3 stages. 3 different stories.

VIEW

1,597,754

100%

Above Benchmark

6.92% overall conversion vs industry 1–3%. The headline is good.

CART

View → Cart

Top-Funnel Leak

75% of visitors — 1.2M users — never added a single item to cart.

PURCHASE

110,518

6.92%

Overall Conversion

Cart Abandonment

72.25% abandonment rate — right at the ~70% industry benchmark.

"The platform converts well compared to industry — but 75% of visitors never reach the cart."

THE \$1.52M PROBLEM

288,701 users added to cart. Then walked away.

REVENUE AT RISK

\$1,518,567

estimated recoverable revenue
from 288,701 abandoned carts

288,701 users × \$5.26 avg cart value = \$1.52M

Abandoned

~70%

Industry Benchmark

*"These users already showed intent. They put something in their cart.
The barrier to recovery is low."*

*At \$5.26 avg cart value, a small incentive closes the deal. Even
recovering 10% of abandoned carts = \$151,856 from a single
automated workflow.*

SEASONALITY: OCTOBER BROWSES, NOVEMBER BUYS

The monthly funnel breakdown reveals a consistent pre-holiday pattern.

"Invest before October. Convert in November. Don't let December go unplanned."

OCTOBER ANOMALY

Highest view-to-cart rate (34.46%) but lowest cart-to-purchase (19.25%). Users browse aggressively, commit hesitantly. Classic pre-holiday wishlist behaviour.

NOVEMBER CONVERTS

Cart-to-purchase jumps to 32.86% — the highest of any month. October's browsers are now buying. Holiday intent crystallised into purchase.

DECEMBER SURPRISE

Revenue drops to \$1.08M despite Christmas month. Cosmetics gift-buying peaked early in November — a dedicated December gifting strategy is missing.

THE RETENTION REALITY

86% of new users never return after their first month.

PLATFORM

13.71%

Month 1 Retention

BELOW BENCHMARK

INDUSTRY

20–30%

Month 1 Benchmark

TARGET RANGE

Cohort	Size	M0	M1	M2	M3	M4
Oct 2019	399,664	100%	13.71%	10.64%	8.26%	6.74%
Nov 2019	329,384	100%	13.68%	10.03%	7.93%	—
Dec 2019	313,262	100%	12.07%	9.07%	—	—
Jan 2020	299,377	100%	13.35%	—	—	—
Feb 2020	298,271	100%	—	—	—	—

THE DECAY PATTERN

Oct cohort: 100% → 13.71% → 10.64% → 8.26% → 6.74%

The steepest drop is Month 0 → Month 1. Users who survive that cliff are relatively sticky — the problem is getting them to return the first time.

"The intervention window is the first 30 days — before Month 1. After that, the users who stayed are already committed."

THE PLOT TWIST

Retention looks broken. But look at what happens after someone actually buys.

STORY 1

86%

of all users never return
after Month 1

Retention is terrible

VS

STORY 2

89.66%

of users who ever purchased
bought again

Purchase loyalty is exceptional

THE RESOLUTION

The platform doesn't have a loyalty problem. It has a first-purchase problem. The 6.92% who convert are highly loyal — 90% come back. The 93% who don't convert are lost forever. Get more users to their first purchase and retention largely takes care of itself.

WHAT ELSE THE DATA SAYS

Monthly Revenue Trend

TOP BRANDS INSIGHT

runail — #1 by volume & revenue. Concentration risk: any disruption has outsized impact.

eunzul — 51.32% conversion. Product-market fit signal. Scale immediately.

"November peaked at \$1.53M. Revenue swings are driven by buyer volume — not how much each buyer spends."

11.91 days

Avg Time to First Purchase

Attribution windows need 14+ days

\$22–\$26

Avg Order Value (stable)

Revenue driven by volume, not spend

4.17

Events per Session

Users explore multiple products

51.32%

eunzul Conversion Rate

7× the platform average of 6.92%

apparel.glove — 39.59% category conversion. Highest on the platform. Expand the range.

STRATEGIC RECOMMENDATIONS

Every recommendation is traceable to a specific number.

01

First-Month Re-engagement

Trigger automated touchpoints at Days 7, 14, 21 post-signup. Grounded in the 11.91-day consideration cycle and 86% Month 1 churn.

02

Cart Recovery Within 24 hrs

288,701 abandoned carts. \$1.52M at risk. At \$5.26 avg value, a small incentive closes the deal. Even 10% recovery = \$151K.

03

Invest Ahead of November

October browses, November buys. Budget, inventory, and campaigns must be confirmed before October begins — not during the peak.

04

Scale eunyul

51.32% conversion rate — 7× platform average. Increase visibility, expand inventory, feature in re-engagement. The data says it sells itself.

05

Protect runail

#1 brand by volume and revenue. Concentration risk. Maintain supplier agreements. A runail stock-out is a platform-level revenue problem.

06

Expand apparel.glove

39.59% category conversion — highest on the platform. Demand exists and is unmet. Expand range and promote within funnel.

07

Fix Attribution Windows

Standard 7-day window misses half your conversions. Avg buyer takes 11.91 days. Set attribution to 14 days — grounded in data.

08

December Gifting Strategy

December revenue dropped to \$1.08M — lowest of 5 months. Cosmetics are gifting products. A targeted campaign with bundles can recover this.

"Every recommendation in this project has a number behind it. That's the difference between analysis and opinion."

***"The platform's conversion rate beats industry average.
Its retention rate doesn't come close.
The opportunity is not in acquisition — it's in the first 30 days after a
user arrives."***

Conversion Win

6.92% overall conversion exceeds the 1–3% industry benchmark. The platform's top-line number is a genuine positive.

Retention Gap

13.71% Month 1 retention vs 20–30% benchmark. 86% of users gone within 30 days. The single highest-value intervention point.

The Real Lever

89.66% of buyers repurchase. The problem isn't loyalty — it's getting users to their first purchase. Solve that, and retention follows.
